## SP AusNet \$12.8M power upgrade in Traralgon

Traralgon's electricity supply and capacity for future demand will be strengthened by SP AusNet's \$12.8 million infrastructure upgrade beginning next week.

Local communities will likely notice an increase of construction activity along McMahon Street over the coming months, as crews commence works upgrading SP AusNet's zone substation and associated infrastructure.

SP AusNet's Eastern Regional Manager, Mr Jim Haylock, said: "The project will strengthen electricity supplies in Traralgon and maintain reliable supply for customers into the future.

"Our plans are designed to minimize the impact to the local community and we would like to thank people for their patience while we undertake these extensive works."

The works program is expected to be completed by end of November 2013.
